

CUSTOMER FEEDBACK

Greg has a brilliant mind, weaving the pieces together into an elegantly SIMPLE trading system comprised of a different method of counting ("D'oh! Why didn't I think of that?!?!?") and a means to anticipate (or confirm) price pivots. Greg has shown how having a statistical edge can get you into inexpensive option plays that potentially return 200-1500% in less than a few weeks. Now, if you are able to generate 5% profit on your trading capital each trading day (tough to do), you'll double your capital every month. Get 400% every 2 weeks and you can compound a day trading account into millions of dollars in under a year. This is what I was looking for and what I feel I've found in Greg's course.

Numerous forum members have posted charts, insights, and software tools for identifying cycles in the market. We're all working together to achieve the financial freedom we know exists for Professional Traders. Frankly, what has been shared on the Forum has been worth the price of admission.

In summary, Greg made me realize just how complicated I was making a very simple business (I was missing the forest for the trees). Subsequently, I've gone back to Gann, Jenkins, Gilmore, Bean, etc., and now 'see' how I can make their timing methods augment what Greg put down in Level I. I can't wait for the next Levels to come out.

BA

Greg, I tip my hat to you for coming up with a very simple but clever method for predicting high-accuracy turning points in the markets. I'm looking forward to the next installment ;-) AB

Today was a great day for volatility with the Cash Dow moving down 777 points. As such, it was also a great day to test Greg's methods in extreme market conditions. I was most impressed with the method's ability to catch the waterfall move down after the open and the afternoon sudden sell-off. Further, the chop that followed the afternoon down-move had several pivot points that were accurately captured as well. Yes, there were locations in the chart where you would have had scratch trades (or small losses). However, these were MORE than compensated by the large range moves.

Thank you for sharing these insights into market analysis. Having for years studied the many facets, this is helping me to put many of the pieces together. Greg's different approach to the fib sequences work very well on a 5 minute QQQQ chart. RA

BTW, The Fibonacci stuff is amazing. I still can't believe it works. Like lets just use the first two digits from five digit number that we worked out, bizarre but it seems to be close to spot on when applying it to markets. SA

Please express my sincere thanks to Greg not only for this material, but also for taking time to share and for showing us the possibilities. I have much to unlearn but I have taken one short trade thus far using the concepts in the QQQQ and have scored a 150% return on risk just trading the underlying without options. I got out too soon as the trade would have been even more profitable. TS

Wow! Bonds - 90 minute charts - Black Jack. Black Jack. Black Jack. 'Nuff said? Did someone slip me 30 or so Viagra? I can't stand up... MF

Can't do any better than this, on the ES, got the dip to 786 sold 816, rebought the breakout, and 866 turned out to be the top. Do your homework with this technique, it works!! TD

I've been through the material twice and am kicking myself for missing the 'obvious' all these years! :-)
Please thank Greg for the laser-beam focus on trading applications of the Fib Series. He's handed me some keys to Gann's work that I missed before (it was right in front of me the whole time- D'uh!!!!).

Greg's genius is in the ability to take a 'common' concept and find the 'magic' in its application. Gann et. al., often spoke about finding the vibration number of a market and exploiting that knowledge. Greg has done just that-- juxtaposing different time frames until the underlying price rhythm becomes apparent. This is a simple concept with atomic power!

Over the years I have tried different approaches to understanding the Law of Vibration and what Gann et. al. had alluded to with market vibration numbers. Thanks to you and Greg, the missing link in my research has fallen into place. I can now take planetary cycles, Mike Jenkins' geometry methods, and Greg's counts and pinpoint high-probability market turns (and know their direction). What you've given me is nothing short of the ability to retire from medicine and immerse myself in 'esoteric' studies-- something I've wanted to do all-along.

As a student of Alan Andrews I am VERY much looking forward to the next installment. Greg also teased us with a hint of a Gann-specific manual. You're not going to be able to get him to write the next volumes fast enough as far as I'm concerned! :-)

AL

Hi Greg, thanks for the course. I think that its simplicity is its strength. So often with Gann and market geometry in general its hard to see the wood from the trees whereas this is a good trading plan not just a theoretical approach. I just thought I'd send you an update of the Bund chart that I sent last week highlighting the potential turning point. It worked brilliantly!!! If you remember, we had 2 time projections and Fibo time coming together and since then we have had a 400 cent sell off. We now have another turning point to look for today When I drilled down to the minute chart there was a cluster there too yesterday afternoon indicating we should be looking at long positions. Thanks to Greg for both his book but also his insights in the forum. DR

Thank you first! Thank you for your generosity to share those invaluable market knowledge, at least, to me!

I live in Hong Kong. I am so surprised to see you showing an example with a Heng Seng index chart. That's a great help for me because I trade this index futures majorly.

When I completed my first scan on your course material, my instant feeling is that your tools are so straight forward and can be easily applied to trade the markets! Not like to study astrology or some other Gann stuffs which are not so easy to master or so complicate when use them to trade.

My opinion is: Your methods are most trader's dream tools!

So, thank you, thank you, thank you!

Best and Success, FLT

I received my Course this morning, and you're right, it's fantastic. I have already read the first third, and can see applications immediately in my own markets. TW

My two cents on Shrader's course:

In science there is something called a gauge symmetry. Einstein used a gauge symmetry to create his basic groundbreaking theories. Gauge symmetries take seemingly disparate pieces of existing knowledge and combine them in new ways. There technically was nothing new in Einstein's work. One could find all the technical information from other sources. What is new in a gauge symmetry is that already known material is combined in a new way to create something new.

When I first saw Greg's Course, I thought that I had seen this a million times before, but then I could not find it in any of the books in my library. Sure, someone must have done it before, but I could not find it used in this way. I bought the book and started working with the material and found very deep insights that it offers that are quite new, at least to me. We all vibrate at our own levels and Greg's knowledge was correct for me at this time, and this new level of insight I've gained was easily worth the price of the book in my opinion. And you know, it works unbelievably well. It showed me some simple, fundamental insights that, when combined on my desk, provide a gauge symmetry and make the book well worth the price of the admission. SR

Here's an analogy that best describes my feelings about Greg's course and intrinsic worth:

An old but critical piece of assembly line machinery broke down suspending production on a lucrative manufacturing line. Several in-house mechanics attempted to fix the machine but to no avail. When the Foreman realized a lot of money was being lost for every hour the assembly line was down, a Specialist was quickly called in. While the other mechanics watched, the Specialist felt the machine with his hands sensing the vibration at different points. Reaching into his pocket, the Specialist pulled out a piece of chalk and marked an "X" on the machine. Next, he reached into his tool bag and retrieved a hammer. Striking the X with all his might, the machine came back to life and production line restarted to the amazement of the other mechanics.

The Specialist then handed a bill to the Foreman for \$5000. The Foreman sputtered, "How do you justify \$5000 for what you just did?" The Specialist replied, "I'm charging you five dollars for striking the machine with my hammer. You're being charged \$4995 for my knowing where to place the X."

Greg's course on Fibonacci Applications has immediate parallels to this story.

The Dow and S&P "machines" have broken down and "production" of retirement funds has ended. Each day this "assembly line" is down we lose significant dollars from our retirement accounts and other portfolios. The huge increase in volatility has produced characteristic vibrations in the markets which can be seen (and felt in the pocketbook). As "In-House Mechanics" we've all been exposed to Fib Numbers and their applications to time and price calculations. If you're like me, you've had some success with these numbers but the "investment machine isn't running smoothly" yet.

Greg is the Specialist who has amazing talent as identifying vibration and knowing where to place the "X." The hammer (Fib numbers) is ordinary. The method he teaches for applying the "hammer" is extraordinary. Greg assumes we know how to swing the hammer—he's teaching us where and how to hit with it in his Level I Fib Course.

Cost: \$5 for 90 pages of instruction (not counting support materials)
\$4995 for the wisdom of how and where to 'hit' with Fib numbers and ratios.

Market volatility can be a WONDERFUL thing if you're on the right side of the moves. Greg's course will reveal a method for significantly increasing the odds of getting your financial assembly line back in working order — in time to capitalize on current market conditions. AB

Some of Dan Ferrera's comments about this work:

If people are interested, I spent 4 straight days programming code for Greg's course in TradeStation. After reading Greg's material and studying the analysis methods in his course, I think this material would be highly useful for the people who own Keys to Successful Speculation and Spirals as it really adds to the trading methodologies in those books, which easily work in conjunction with his Timing points. It will certainly add valuable timing indications to confirm Spirals counts as well as Keys entry points.

I think the best method for Spirals or even swing trading is to use the last two (maybe a 3rd H-L-H or L-H-L) most important tops and bottoms and ignore those that are further in the past. You could even filter the timing prices by using a large swing size requirement for these projections. That way you would ignore much of the stuff in between significant tops and bottoms and keep it all relative to the time frame you are analyzing.

The inverse relationship must also be true. In other words, if you can use the Fibonacci to get a future "Time" then the reciprocal of knowing that time must somehow convert back to a series of specific prices by reversing the logic. It could be done pretty easy as a show me study like I did with Greg's Fib-bar counts. If I get a chunk of time I may attempt to program the swing code to find these points automatically, similar to the 5&9 indicator, but this would be very difficult programming. Dan

I received my copy of Greg's book yesterday and have had a nice day applying the knowledge to a corn chart. I enclose the first corn chart I have worked on, a long term weekly front month continuation that shows some very interesting results. Specifically, I point to the extreme accuracy of the range relationships between four turning points, two highs and two lows.

I have always viewed markets as moving in electromagnetic fields. My job is to identify the points in these fields where magnetic pressures exchanged polarities. The chart I present here certainly is not enough to statistically verify the theory I present, considering it is only my first attempt, but it is so darn interesting I cannot keep from presenting it. Basically, the theory is that ratio-time sequences reflect the growing and decaying energy waves, so when there is coherence between two projections that come from highs and lows that form a range, one might expect this field change phenomenon. If this chart is any example of the reality of this phenomenon, we are all in for a real treat.

Greg, thank you for presenting us with a new way of seeing and thinking. Greatly appreciated. RS
